Preface

Greetings,

Contents

Preface	1
1 An algorithm for solving a system of linear equations	3
1.1 Row-reduced echelon form	3
1.2 On the number of solutions to a linear system	3
2 Matrix algebra	4
2.1 Review of the inner product of vectors	4
2.2 Matrix addition	4
2.3 Matrix multiplication	4
2.4 Rules of matrix algebra	4
3 Linear transformation	5
3.1 Common linear transformations	5
3.1.1 Projection	5
3.1.2 Rotation	5
3.1.3 Reflection	5
3.1.4 Horizontal shear	5
3.1.5 Vertical shear	5
3.2 Inverses of linear transformation	5
3.3 Rank, kernel, and image	5
4 Vector spaces	6
4.1 Basis, span, and linear independence	6
4.2 Dimension of a vector space	6
5 Coordinates	7
5.1 Conversion formula	7
5.2 Change of basis for a linear map	7
6 Introduction to Linear Spaces	8
6.1 Rank-Nullity theorem	8
6.2 Isomorphism	8
6.3 The matrix of a linear map	8
7 Euclidean geometry in \mathbb{R}^n	9
8 Determinant	10
9 Eigenvalues and eigenvectors	11
9.1 Geometric and algebraic multiplicity	11

- 1 An algorithm for solving a system of linear equations
 - 1.1 Row-reduced echelon form
 - 1.2 On the number of solutions to a linear system

2 Matrix algebra

2.1 Review of the inner product of vectors

2.2 Matrix addition

2.3 Matrix multiplication

2.4 Rules of matrix algebra

3 Linear transformation

3.1 Common linear transformations

3.1.1 Projection

3.1.2 Rotation

3.1.3 Reflection

3.1.4 Horizontal shear

3.1.5 Vertical shear

3.2 Inverses of linear transformation

3.3 Rank, kernel, and image

4 Vector spaces

4.1 Basis, span, and linear independence

4.2 Dimension of a vector space

5 Coordinates

5.1 Conversion formula

5.2 Change of basis for a linear map

6 Introduction to Linear Spaces

6.1 Rank-Nullity theorem

6.2 Isomorphism

6.3 The matrix of a linear map

7 Euclidean geometry in \mathbb{R}^n

8 Determinant

9 Eigenvalues and eigenvectors

9.1 Geometric and algebraic multiplicity
