

MATRIX ANALYSIS

A Quick Guide

Huan Bui

Preface

Greetings,

Matrix Analysis, A Quick Guide to is compiled based on my MA353: Matrix Analysis notes with professor Leo Livshits. The sections are based on a number of resources: *Linear Algebra Done Right* by Axler, *A Second Course in Linear Algebra* by Horn and Garcia, *Matrices and Linear Transformations* by Cullen, *Matrices: Methods and Applications* by Barnett, *Problems and Theorems in Linear Algebra* by Prasolov, *Matrix Operations* by Richard Bronson, and professor Leo Livshits' own textbook (in the making).

The development of this text will come in layers. The first layer, one that I am working on during the course of S'19 MA353, will be an overview of the key topics listed in the table of contents. As the semester progresses, I will be constantly updating the existing notes, as well as adding prof. Livshits' problems and my solutions to the problems. The second layer will come after the course is over, when concepts will have hopefully "come together."

Enjoy!

Contents

Preface	1
1 List of Special Matrices & Their Properties	4
2 List of Operations	4
3 List of Algorithms	4
4 Complex Numbers	4
5 Vector Spaces & Linear Functions	5
5.1 Isomorphisms	5
5.2 Coordinatization & matricial representation of linear functions .	5
6 Products of vector spaces & Sums of subspaces	6
6.1 Nullspaces	6
6.2 Ranges of Operator Powers	6
7 Idempotents & Resolutions of Identity	7
8 Block-representations of operators	8
8.1 Direct sums of operators	8
9 Invariant subspaces	9
9.1 Reducing subspaces	9
10 Polynomials applied to operators	10
10.1 Minimal polynomials of block- Δ^r operators	10
10.2 Minimal polynomials at a vector	10
11 Eigentheory	11
11.1 Spectral Mapping Theorem	11
12 Triangularization	12
12.1 Compression to invariant subspaces	12
12.2 Simultaneously Δ -ity of commuting families	12
13 Diagonalization	13
13.1 Spectral resolutions	13
13.2 Compressions to reducing subspaces	13
13.3 Simultaneous diagonalizability for commuting families	13
14 Primary decomposition over \mathbb{C} and generalized eigenspaces	14

15 Cyclic decomposition and Jordan form	15
15.1 Square roots of operators	15
15.2 Similarity of a matrix and its transpose	15
15.3 Similarity of a matrix and its conjugate	15
15.4 Jordan forms of \mathcal{AB} and \mathcal{BA}	15
15.5 Power-convergent operators	15
15.6 Power-bounded operators	15
15.7 Row-stochastic matrices	15
16 Determinant & Trace	16
16.1 Classical adjoints	16
16.2 Cayley-Hamilton theorem	16

- 1 List of Special Matrices & Their Properties**
- 2 List of Operations**
- 3 List of Algorithms**
- 4 Complex Numbers**

5 Vector Spaces & Linear Functions

5.1 Isomorphisms

5.2 Coordinatization & matricial representation of linear functions

6 Products of vector spaces & Sums of subspaces

6.1 Nullspaces

6.2 Ranges of Operator Powers

7 Idempotents & Resolutions of Identity

8 Block-representations of operators

8.1 Direct sums of operators

9 Invariant subspaces

9.1 Reducing subspaces

10 Polynomials applied to operators

10.1 Minimal polynomials of block- Δ^r operators

10.2 Minimal polynomials at a vector

11 Eigentheory

11.1 Spectral Mapping Theorem

12 Triangularization

12.1 Compression to invariant subspaces

12.2 Simultaneously Δ -ity of commuting families

13 Diagonalization

13.1 Spectral resolutions

13.2 Compressions to reducing subspaces

13.3 Simultaneous diagonalizability for commuting families

14 Primary decomposition over \mathbb{C} and generalized eigenspaces

15 Cyclic decomposition and Jordan form

15.1 Square roots of operators

15.2 Similarity of a matrix and its transpose

15.3 Similarity of a matrix and its conjugate

15.4 Jordan forms of AB and BA

15.5 Power-convergent operators

15.6 Power-bounded operators

15.7 Row-stochastic matrices

16 Determinant & Trace

16.1 Classical adjoints

16.2 Cayley-Hamilton theorem
